

Astronomer Name: _____

Moon check time every night: _____

Observation location: _____

MOON JOURNAL

from **SPARK** www.sparktheseries.com
THE SERIES

Go outside every night for 28 nights in a row at the same time each night. Write your observation date below each moon circle. Find the moon and draw how much of the moon you see in the moon circle. If you cannot see the moon, draw an X in the circle. Consider also keeping a journal in a notebook about where in the sky you see the moon and what the weather/observation conditions were that day. After 28 days, draw a conclusion from your observations.
